Professional Projects

IT REQUEST

Environment:

SharePoint Online, HTML, CSS, JavaScript, jQuery, REST API, Bootstrap

Project Description:

The IT REQUEST project involved the development of a professional and user-friendly portal for reporting IT concerns and problems. Users had the convenience of raising new requests within the portal, providing essential issue details. This triggered automated notifications to the designated IT personnel, who promptly connected with the users to address and resolve the reported issues. Upon successful resolution, the tickets were marked as completed, and notifications were sent to both the users and IT personnel, ensuring effective communication throughout the process.

Responsibility:

- Designed the dashboard and pages for the IT Request.
- Created web part pages to enhance the user interface.
- Managed data through lists, ensuring efficient data organization.
- Developed lookups, people picker for better data management.
- Created list templates to streamline the ticketing process.
- Implemented CRUD operations using REST API for efficient data manipulation.
- Provided application demos to managers for review and feedback.
- Created and managed workflows using automation for seamless IT Request.
- Participated in project deployment to ensure successful implementation.

Professional Projects

HR REQUEST

Environment:

SharePoint online, HTML, CSS, Bootstrap, Rest API, jQuery.

Project Description:

We have developed a user-friendly HR portal for streamlined leave management. Employees can easily request leaves, view their allotted leaves and balance, and access different leave types. Managers have the authority to approve or reject requests and can set monthly leave limits for employees. Email notifications are sent to managers and employees to keep them updated on request status. The portal includes user-friendly filters for improved usability. Simplifying leave management, our portal enhances productivity and efficiency within your organization.

Responsibility:

- Developed and implemented REST API.
- Created and managed various lists and site columns.
- Implemented audience targeting based on group permissions.
- Prepared comprehensive documentation outlining the project scope.
- Designed and developed application workflows using Power Automate.
- Conducted thorough testing and debugging of the application.
- Presented application demo to the manager.
- Assisted in deploying the application to the production environment.

Professional Projects

EXAM APP

Environment:

SharePoint online, Powerapps, Powerautomate

Project Description:

This system is designed for the submission of Microsoft PL exams, providing us with the ability to monitor employees who have completed the exams and those who haven't.

Each employee is allowed to apply only once or twice. The manager is responsible for deciding which exam an employee will take.

With the help of this system, the manager can assess whether an employee has passed or failed the exam. Through the implementation of this automated system

Responsibility:

- Developed and implemented Screens
- Created and managed various lists .
- Manage Permission.
- Prepared comprehensive documentation outlining the project scope.
- Designed and developed application workflows using Power Automate.
- Conducted thorough testing and debugging of the application.
- Presented application demo to the manager.
- Assisted in deploying the application to the production environment.
